Diamond Jobwork Management ERP

Licensed Commercial Desktop ERP with Centralized License & Update Control

Developed using:

C# | .NET Framework | Windows Forms | SQLite (Local Database) | Server-Based Update API

Core Capabilities

- Secure license key activation and validation
- Centralized license and version management
- Integrated digital invoice sharing (WhatsApp, Email, Telegram)
- Automated pending bill reminder system
- Jobwork and workflow automation
- Advanced billing and financial reporting
- Real-time dashboard analytics
- Database backup and recovery system
- Modular architecture for scalable distribution

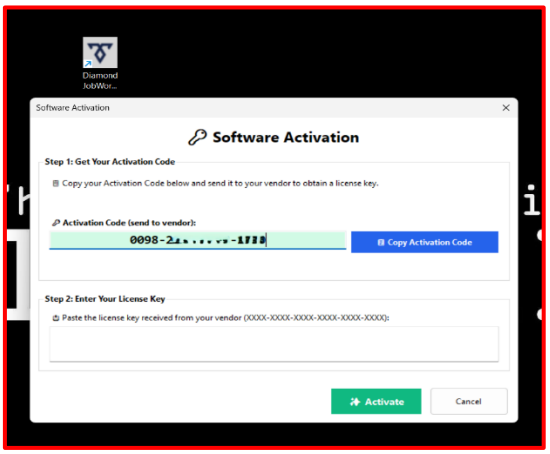
Software Licensing and Activation System

This system is designed as a commercially distributable licensed desktop ERP solution.

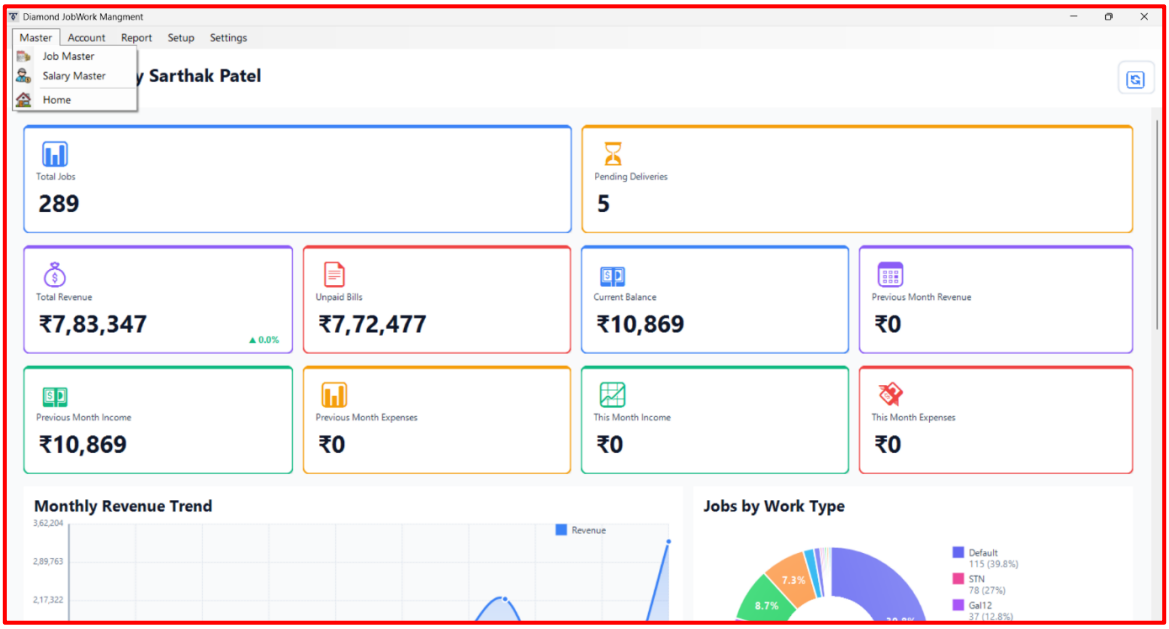
Each installation requires a unique activation key generated and controlled via an administrative license management system. The activation mechanism ensures:

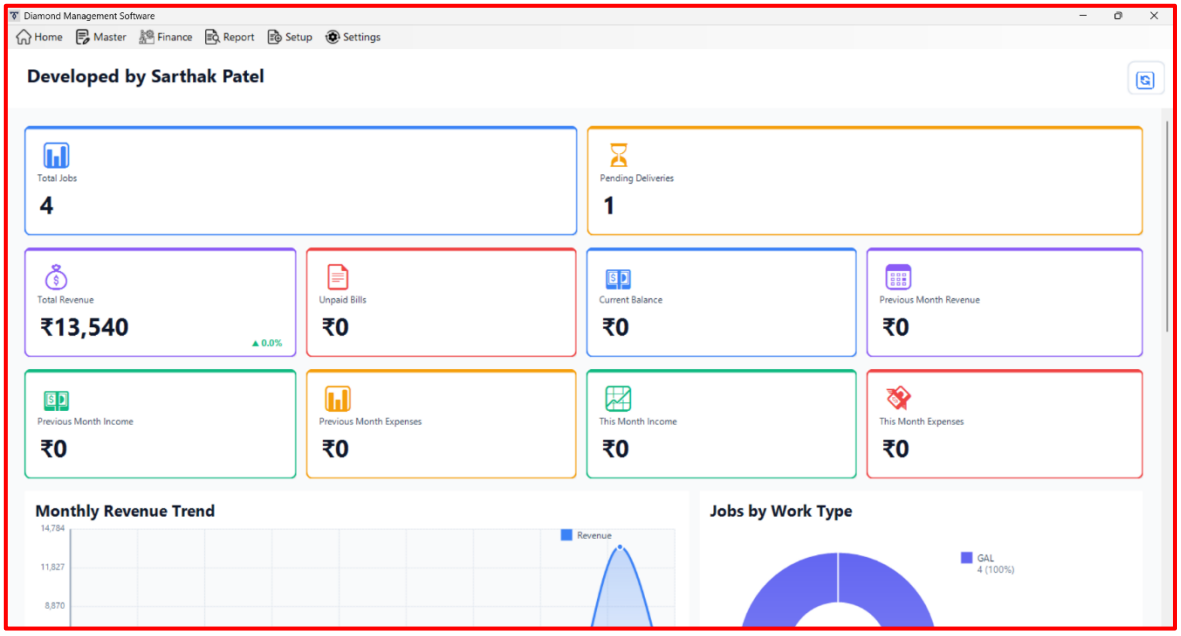
- Authorized installation control
- License duration management (Quarterly / Annual / Custom)
- Secure activation validation
- Controlled commercial distribution

(Software activation system)



(Dashboard with revenue, jobs, analytics)



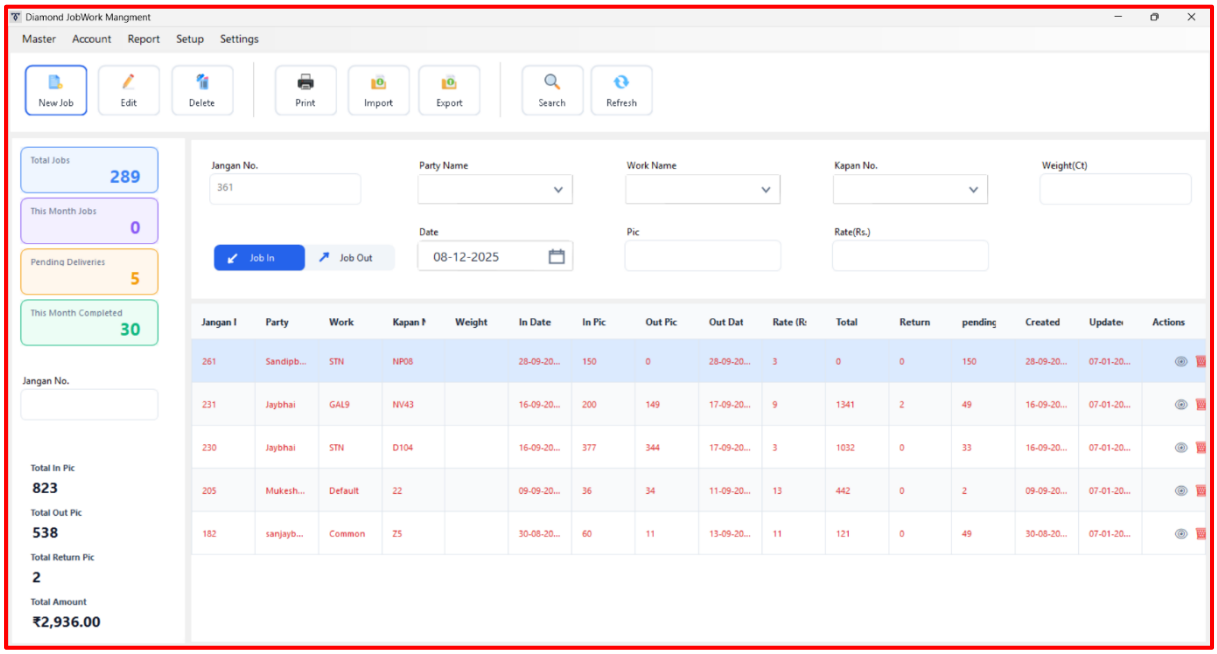


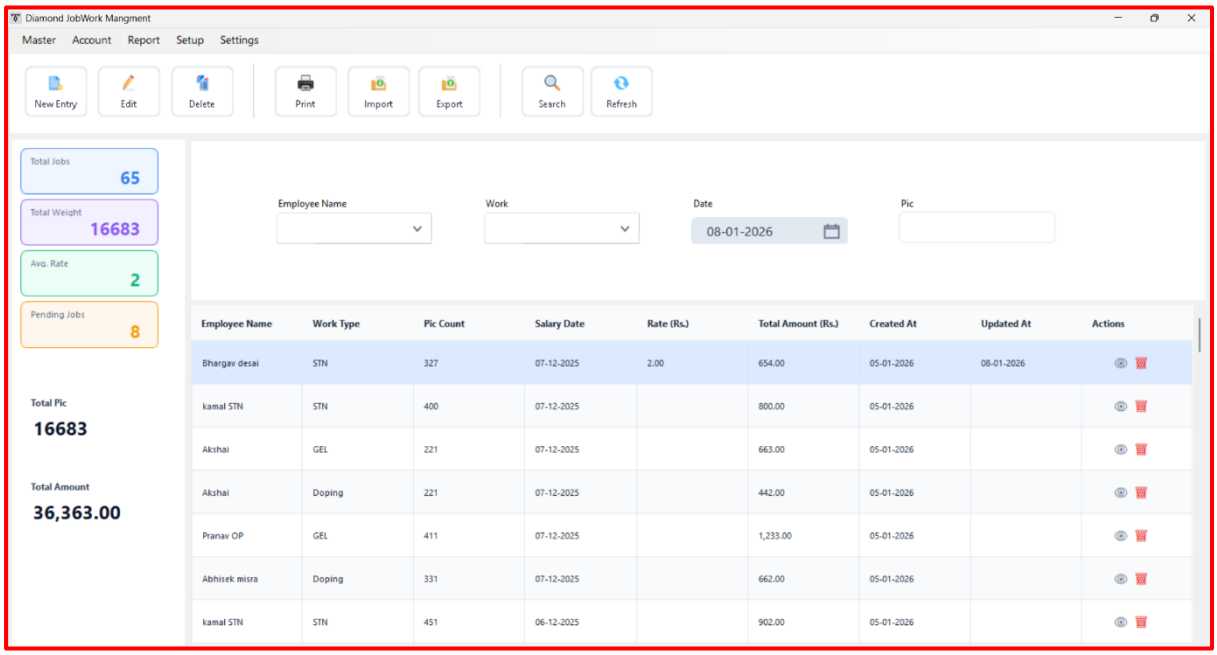
Dashboard Module

Provides real-time overview of:

- Total jobs
- Revenue tracking
- Monthly performance analytics
- Business insights with charts

(Jobwork entry and employee management)



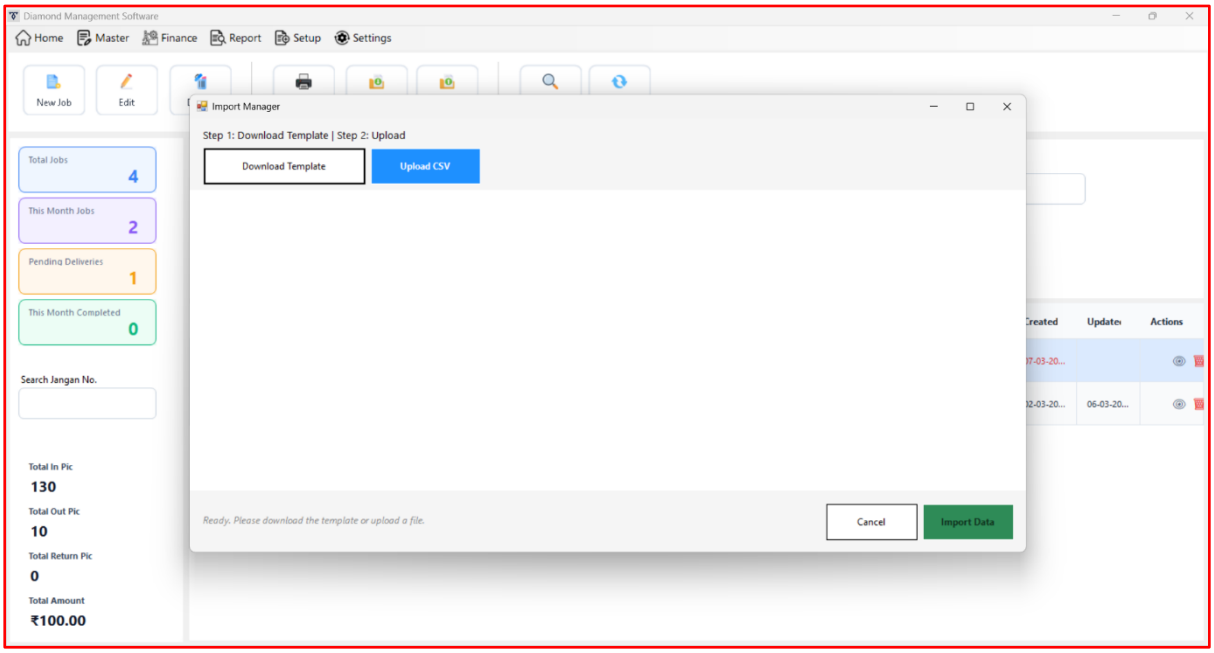


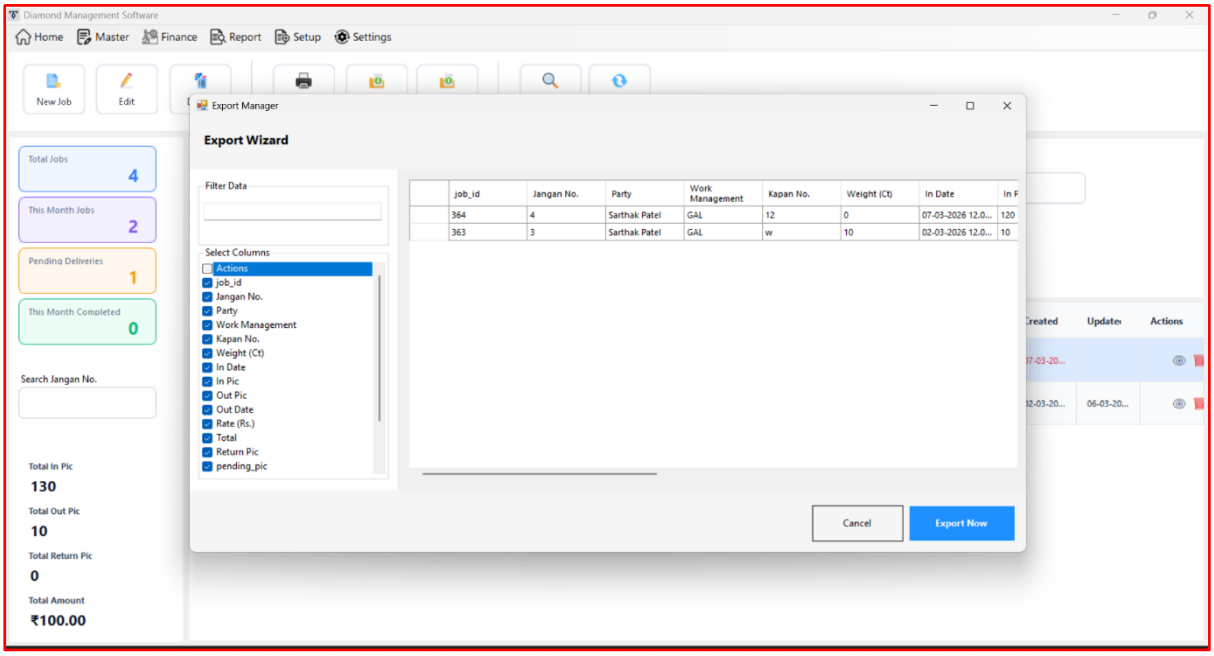
Job Management Module

Allows users to:

- Add and manage job entries
- Track job progress
- Store business records
- Manage workflow efficiently

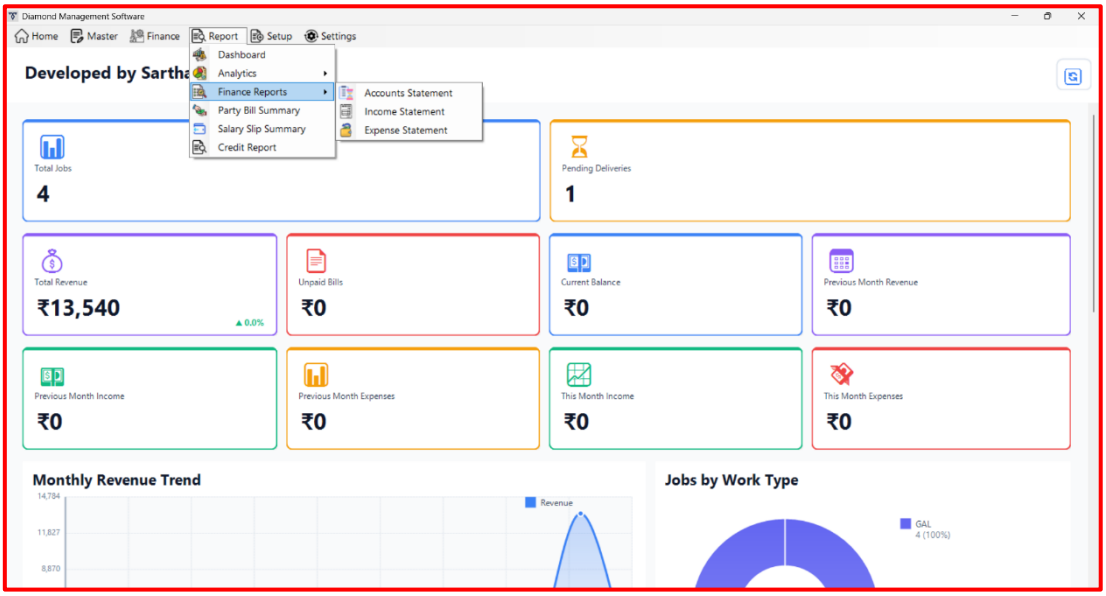
Bulk Data Import & Export System

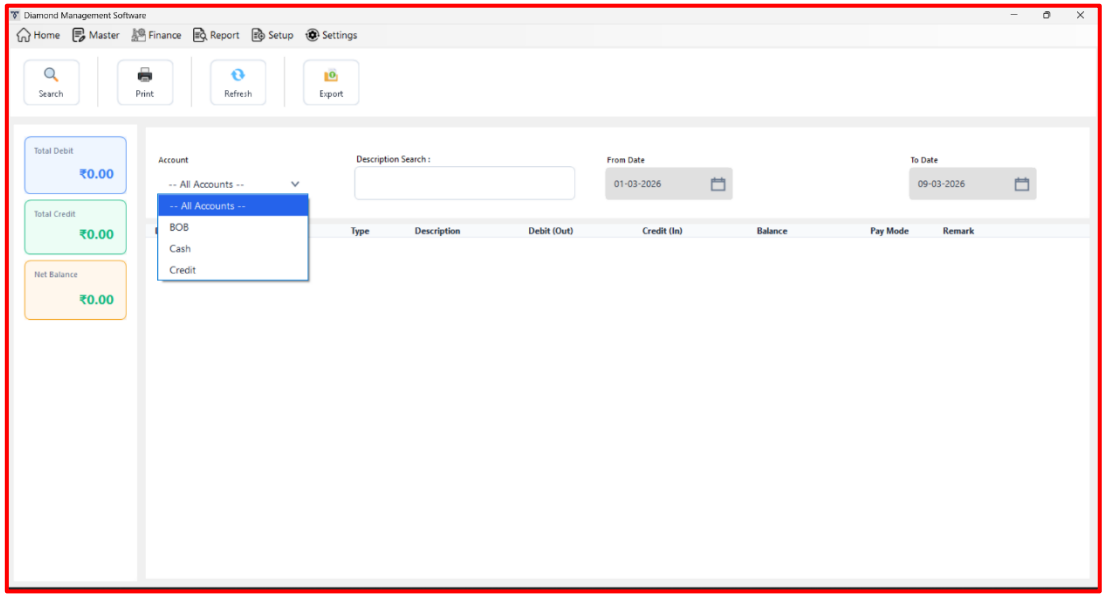




- Export job and transaction data with customizable columns
- CSV export for analysis and reporting
- Downloadable import template for structured data upload
- Bulk job record creation through CSV import
- Data validation before import execution
- Improved operational efficiency for large datasets

(Advanced Accounting Reports)





The software includes a **comprehensive financial reporting module** designed to provide businesses with clear insights into income, expenses, and financial performance.

These reports are generated automatically based on transactional data stored within the system.

Users can access detailed financial reports from the **Reports → Finance Reports** section.

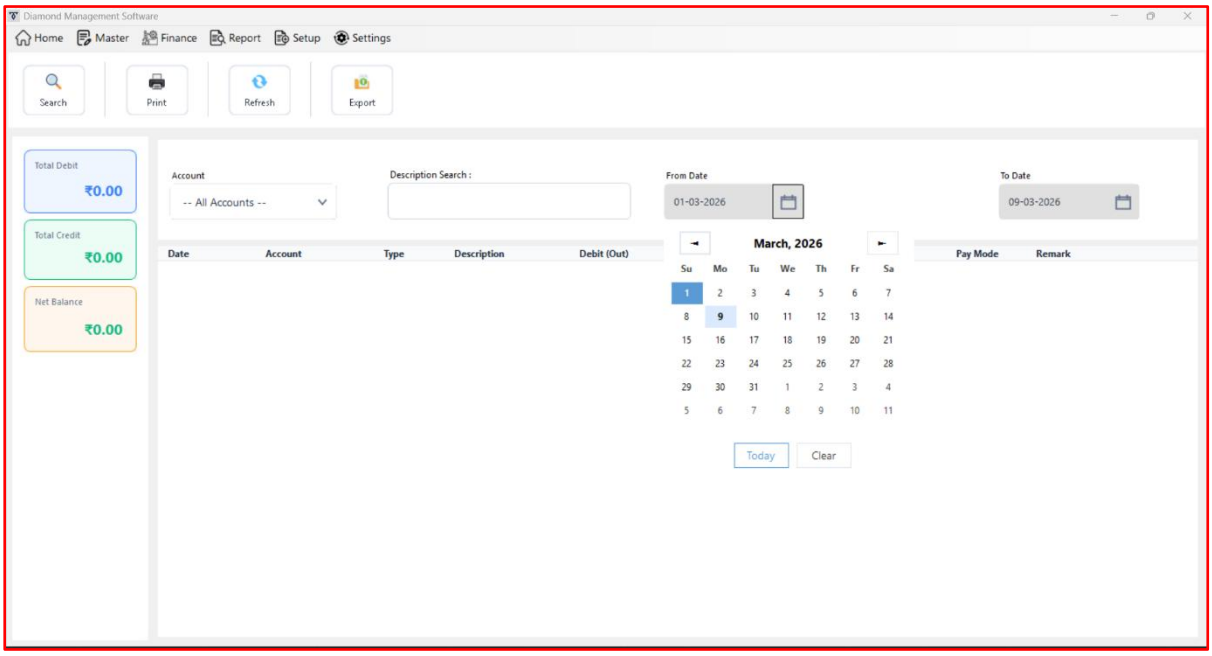
Available Reports

- Accounts Statement
- Income Statement
- Expense Statement
- Party Billing Summary
- Credit and Payment Reports
- Salary Payment Summary

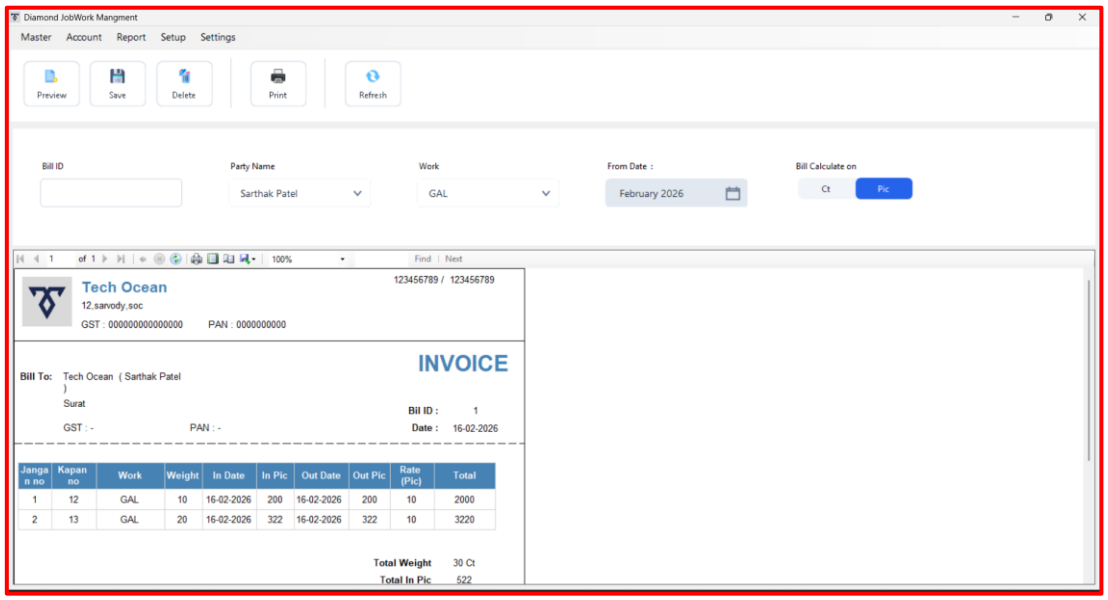
These reports help business owners analyze financial performance, track profitability, and maintain accurate financial records.

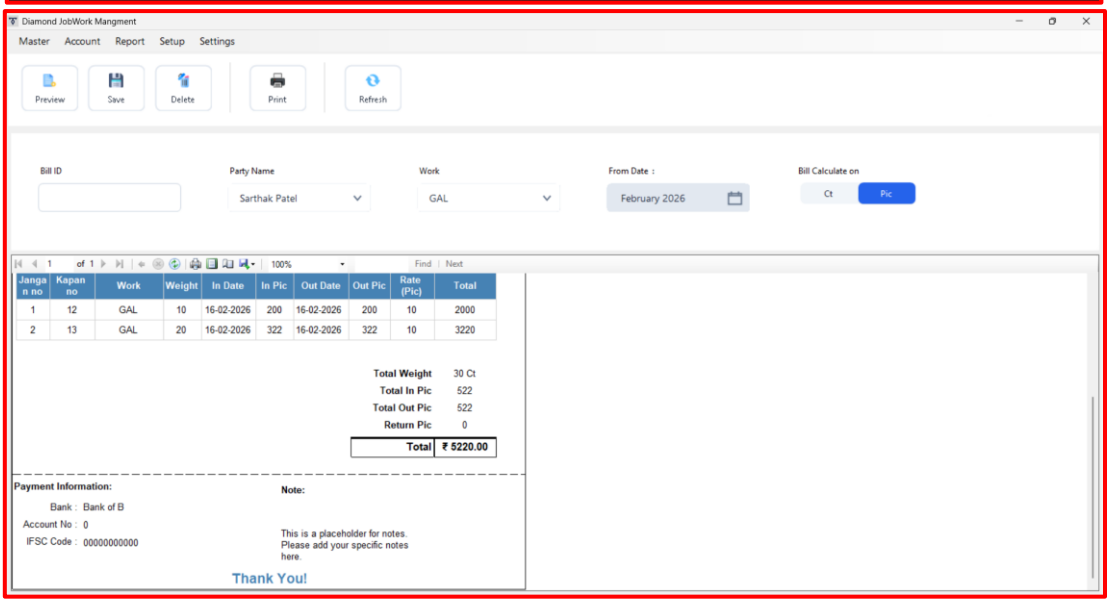
Key Capabilities

- Structured financial reporting dashboard
- Income and expense tracking
- Account balance overview
- Party-wise financial statements
- Monthly financial performance analysis
- Exportable reports for accounting or auditing



(Invoice Creation, Salary,Bill reports & summary)





Key features:

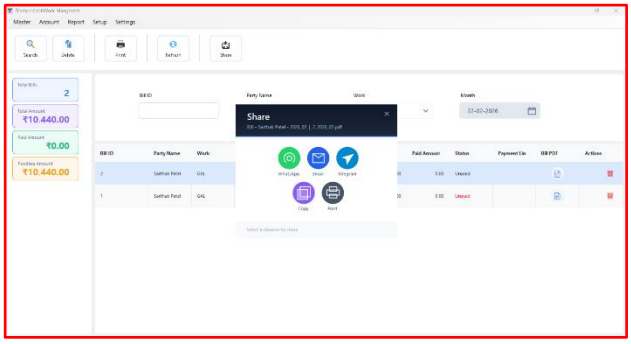
- Automatic invoice generation for all parties with one click
- Generate invoices by selecting specific month or date range
- Bulk invoice creation for multiple parties instantly
- Auto calculation of totals, charges, and balances
- Export invoices to PDF for sharing and printing
- Monthly billing summary and financial reports
- Salary reports and employee payment tracking
- Business performance and revenue analysis

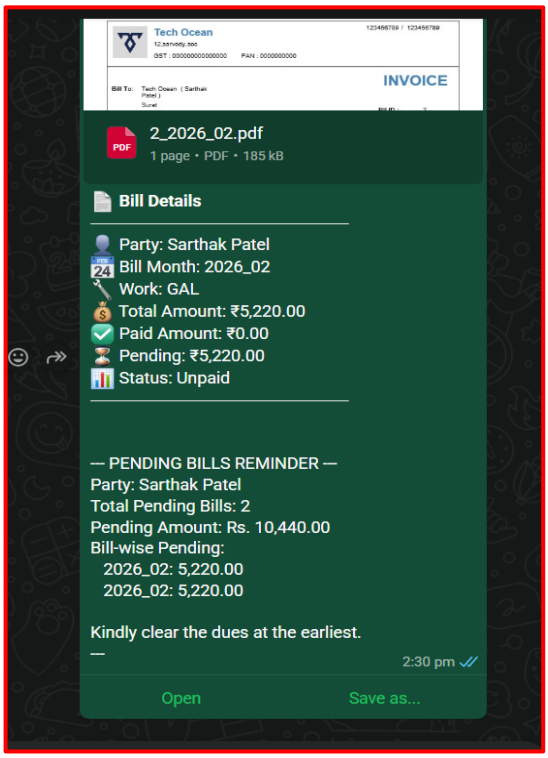
Smart Invoice Sharing & Digital Distribution

The system now includes an integrated multi-channel invoice sharing feature. Generated invoices can be distributed instantly through supported communication platforms.

Key Capabilities:

- Direct invoice sharing via WhatsApp
- Send invoice PDF through Email
- Share via Telegram
- One-click PDF copy and print options
- Auto-generated pending bill reminder message
- Structured bill summary with total pending calculation



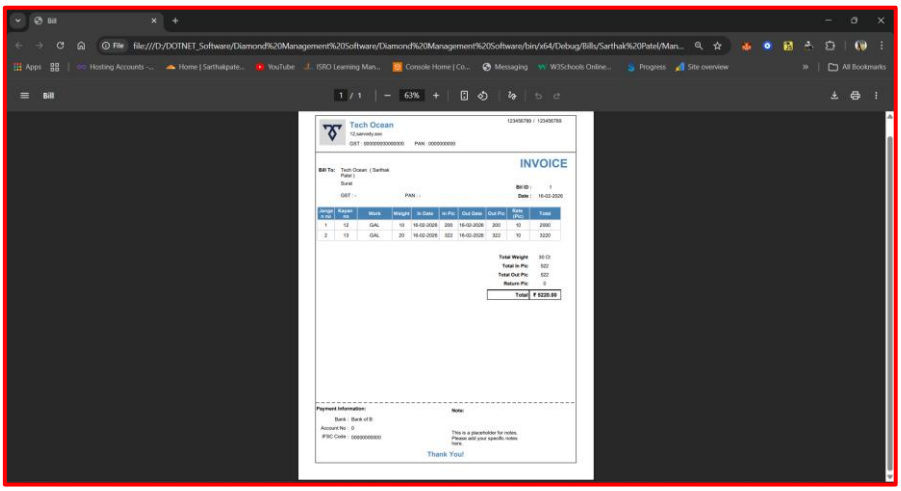


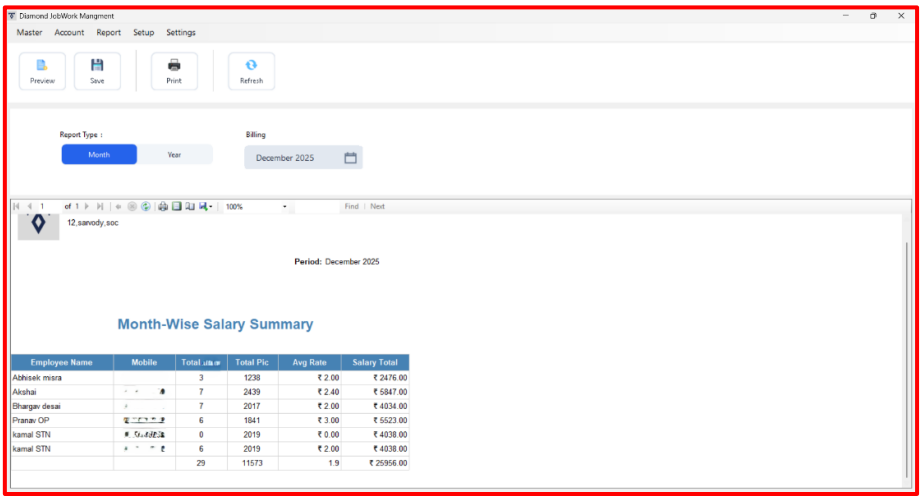
Pending Bills Reminder System

The software automatically calculates outstanding dues and generates a structured reminder message including:

- Total pending bills count
- Total outstanding amount
- Bill-wise pending breakdown
- Clear payment request message

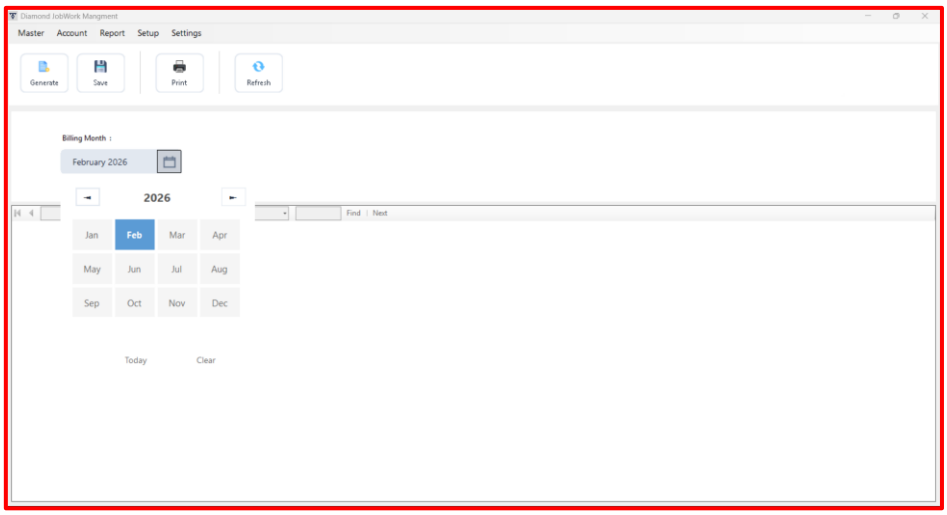
This improves collection efficiency and reduces manual follow-up effort.



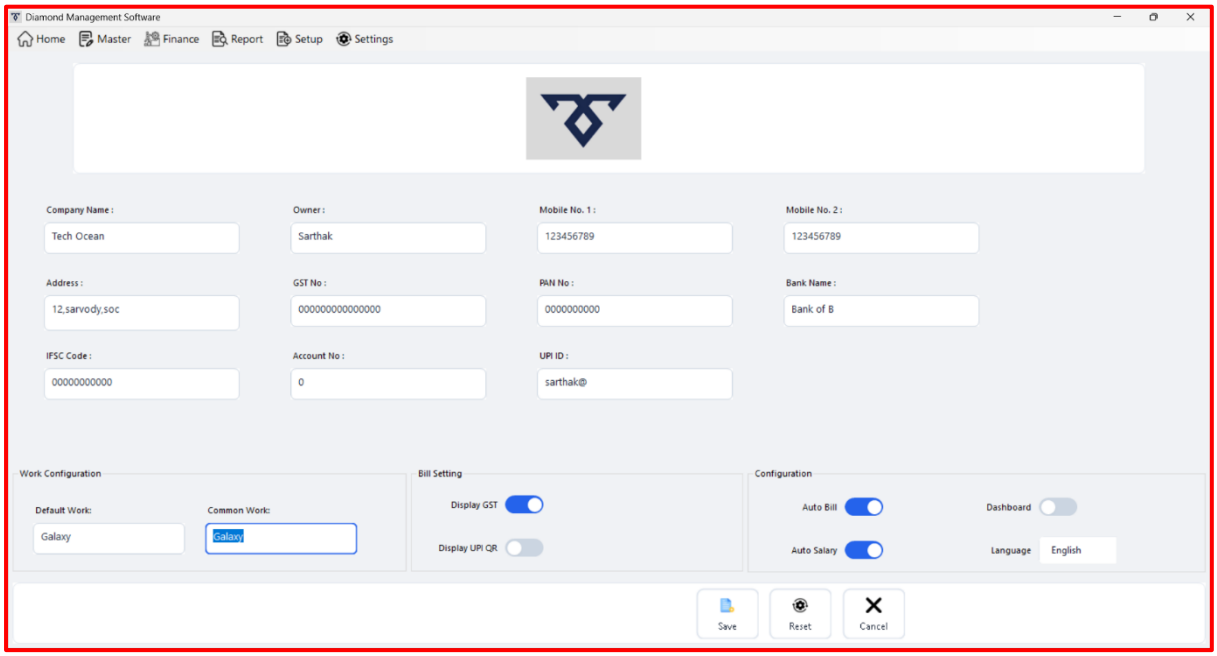


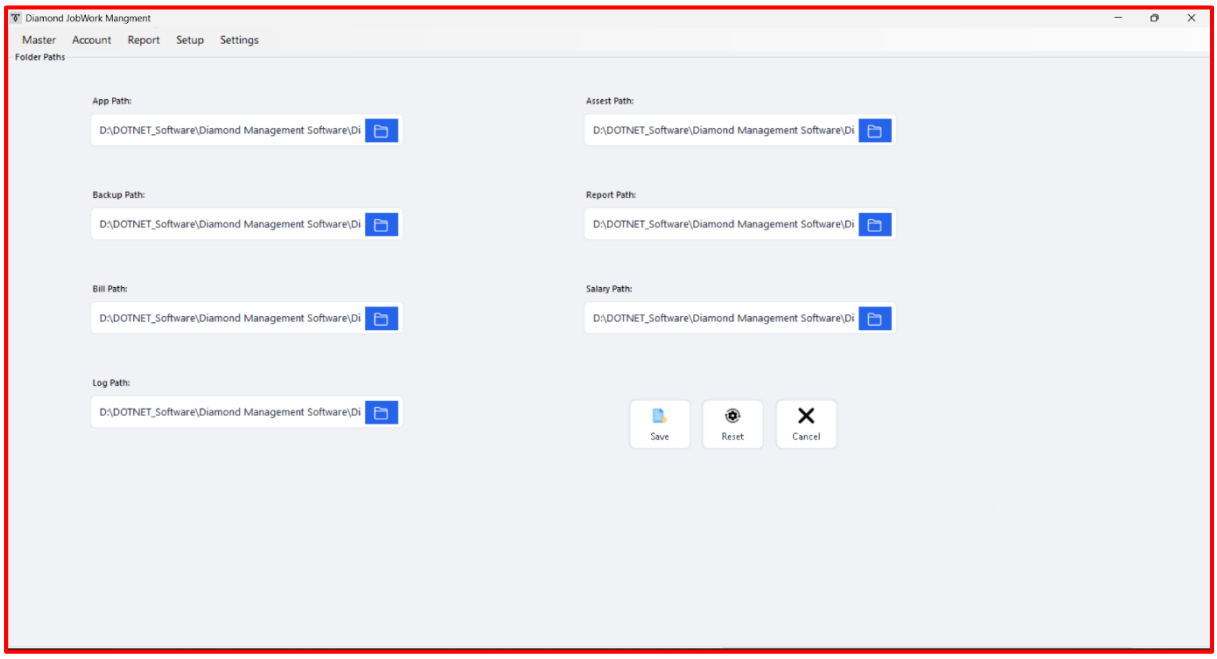
Auto Invoice Generation System

Generate invoices automatically for all parties with one click or by selecting a specific month. The system calculates totals and creates ready-to-print invoices instantly.



(Settings and configuration panel)





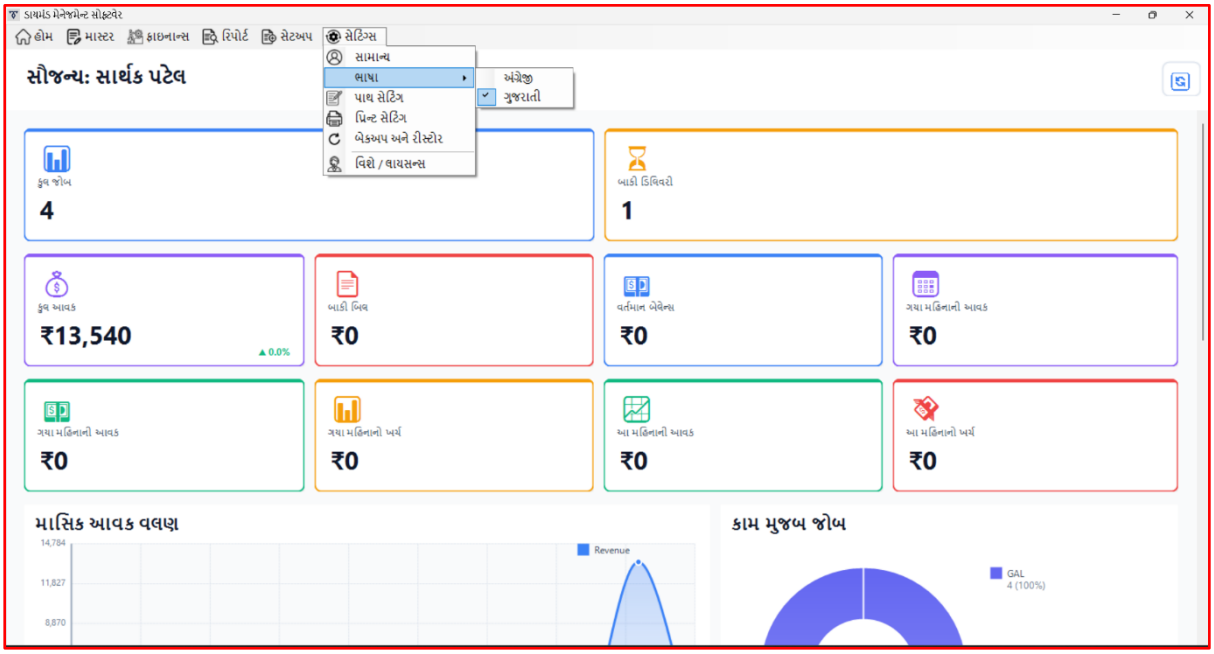
Company and Business Settings:

- Company profile setup (name, address, GST, contact details)
- Business configuration and system preferences
- Custom business rules and workflow setup

Software Configuration and Security:

- System path and storage configuration
- User access and system control settings
- Secure and reliable software environment

Multi-Language Interface Support :



The application includes a built-in multi-language interface system allowing businesses to operate the software in their preferred language.

Users can switch the entire interface dynamically from the Settings → Language menu without restarting the application.

Currently supported languages include:

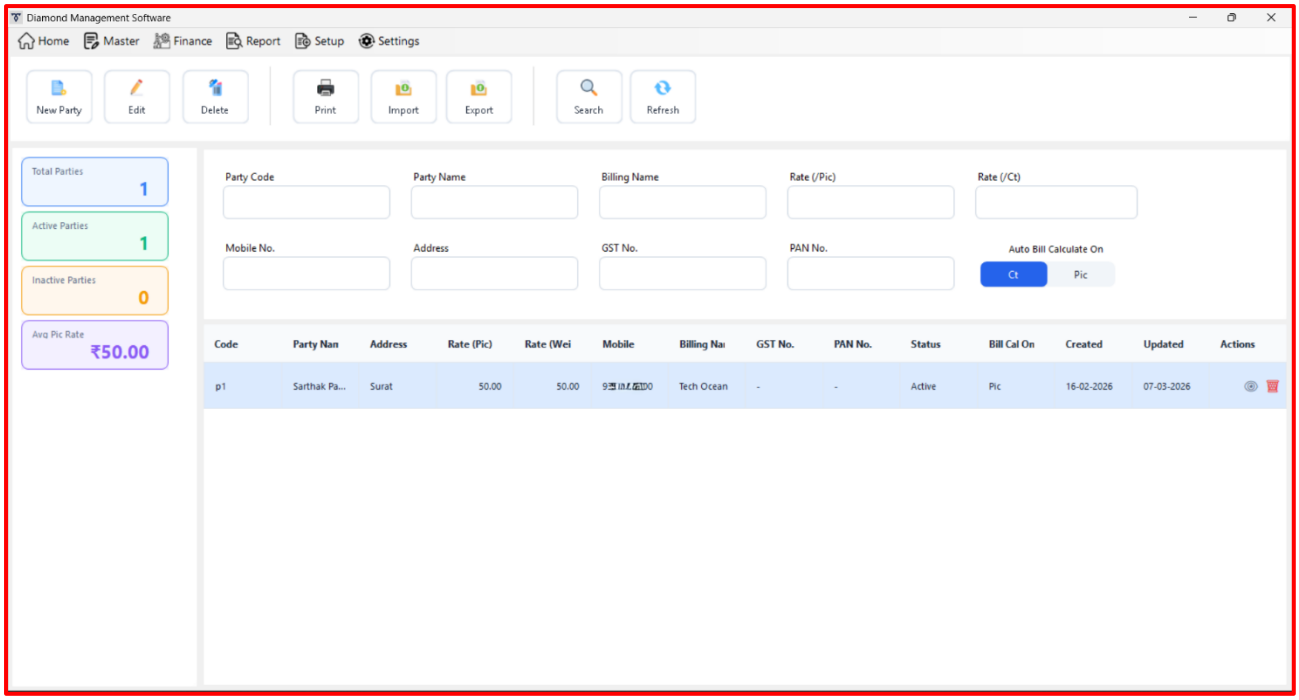
- English (Default Interface)
- Gujarati (Localized Business Interface)

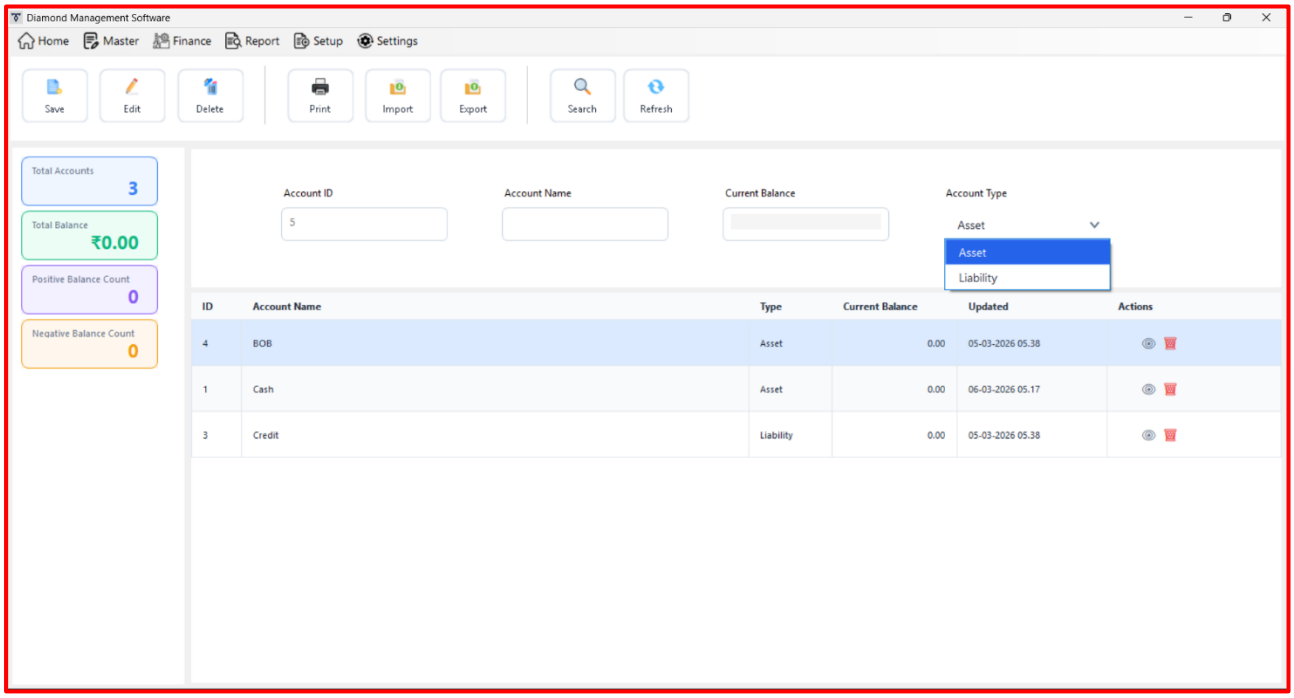
The system architecture allows additional languages to be integrated in future updates using a modular localization framework.

This feature is especially valuable for regional businesses and non-technical operators, enabling them to comfortably operate the ERP in their native language.

Party and Customer Management:

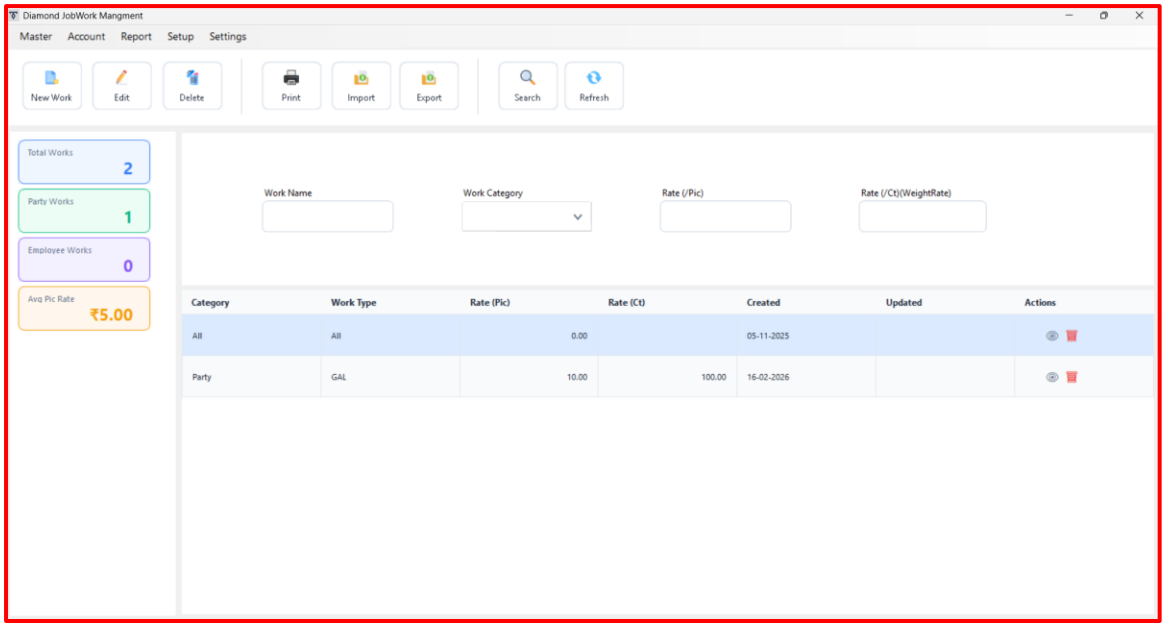
- Add, edit, and manage party or customer details
- Store contact information and business records
- Maintain complete party transaction history
- Support for multiple parties and business accounts





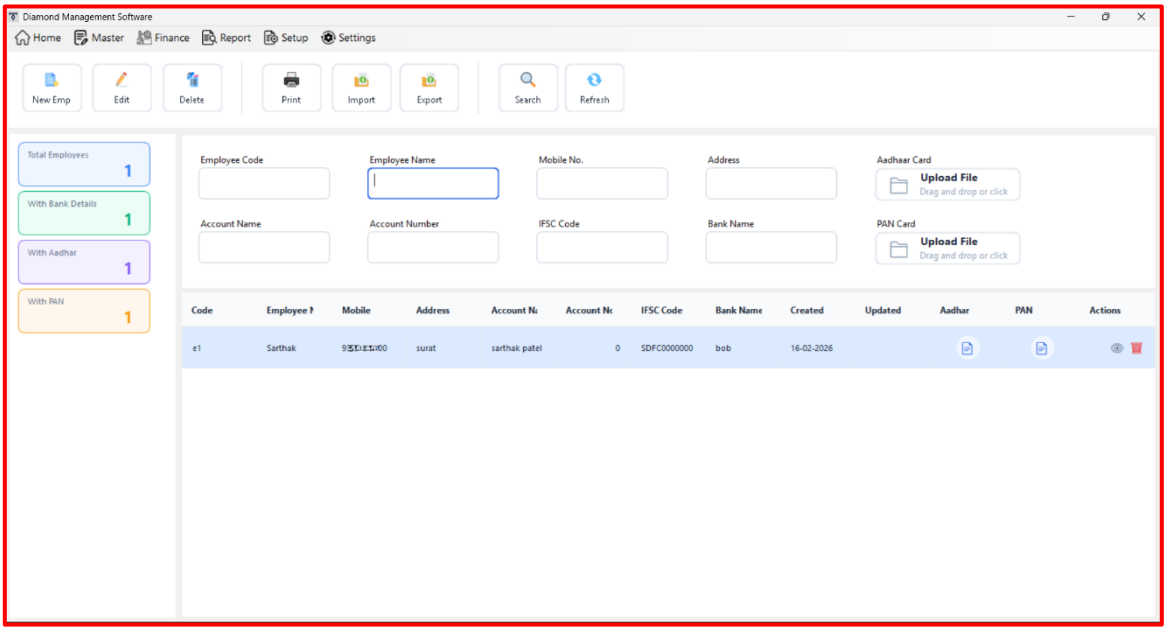
Work and Job Setup:

- Configure work types and job categories
- Define business processes and job workflows
- Customize job parameters based on business needs



Employee Management:

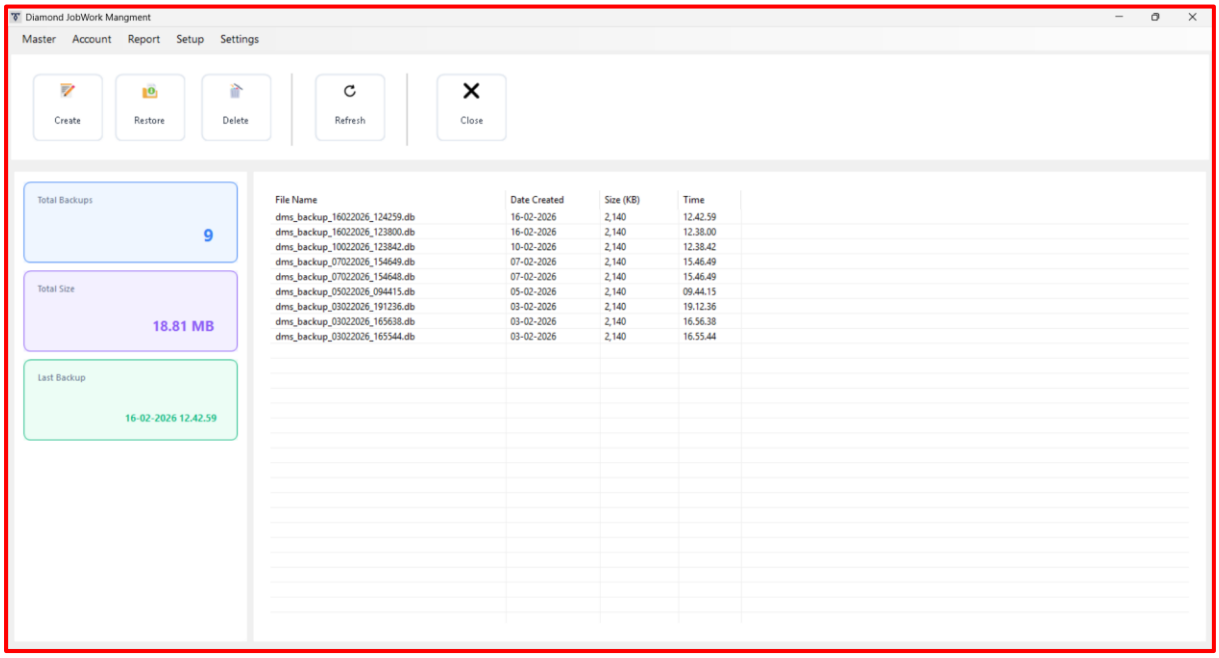
- Add and manage employee profiles
- Assign work roles and responsibilities
- Track employee work records and salary data
- Manage employee performance and reporting



Database Backup and Restore System:

- Secure database backup functionality
- Restore database from backup files

• Protect business data from loss or corruption
• Support for manual and automated backup



System Architecture and Licensing Model

This application is designed as a licensed desktop software solution intended for commercial distribution. It includes a secure software activation system to control access and ensure authorized usage.

Key architecture features:

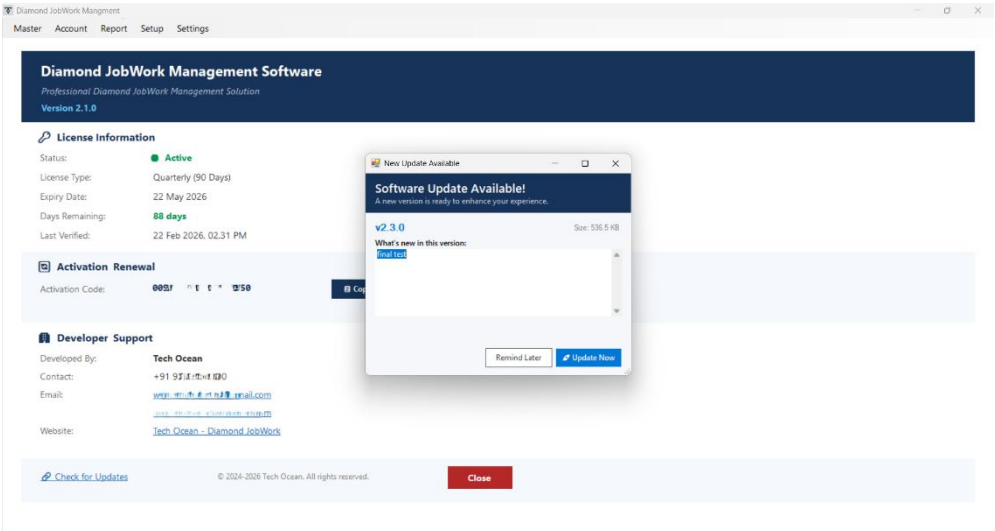
• Secure software activation using unique license keys
• Single user licensed system for individual business installations
• Local database architecture for fast and reliable performance
• Modular system design for easy updates and maintenance
• Secure data storage and reliable system operation
• Production ready architecture suitable for software distribution

This architecture enables startups and companies to sell the software securely to multiple clients using license-based activation.

(Modular system design for easy updates and maintenance)

Online Update & Version Management System

The application now includes a centralized version control and update delivery mechanism.



Update System Architecture:

- Server-hosted version metadata (API-based version control and update)
- One-click version check on application
- Secure update notification popup
- One-click update download and installation
- Version history and change log support
- Controlled rollout via Admin Panel

How It Works:

1. Application checks current installed version
2. Connects to update server API
3. Compares with latest available version
4. Displays update popup if newer version exists
5. User can update instantly or remind later

This architecture ensures all distributed installations remain synchronized with the latest secure version.

Project Summary

Diamond Jobwork Management ERP is a commercially distributable, licensed desktop enterprise solution designed for jobwork-based manufacturing and service businesses.

The system automates core operational workflows such as job tracking, billing, employee management, and financial reporting while integrating a secure license activation system and centralized update management infrastructure.

This architecture allows businesses to streamline daily operations while enabling software vendors to distribute and manage the application commercially through a secure licensing model.

The ERP provides a complete operational ecosystem that improves productivity, reduces manual work, and ensures accurate financial tracking.

Functional Modules Include

- Party and customer lifecycle management
- Jobwork entry and workflow monitoring
- Employee management and salary tracking
- Automated invoice generation and billing management
- Digital invoice sharing and automated payment reminders
- Financial reporting and business analytics dashboard
- Advanced accounting reports (Income, Expense, Accounts Statements)
- Multi-language interface support (English / Gujarati)
- Bulk data import and export system (CSV-based)
- Secure database backup and restore management
- License validation and centralized update management system

---

Technologies Used

- C# (.NET Framework – Windows Desktop Architecture)
- Windows Forms – User Interface Layer
- SQLite / SQL Server – Database Layer
- ASP.NET REST API – Version control and update verification
- License Key Activation System – Software distribution control
- Modular ERP Architecture Design – Scalable and maintainable system

---

Key Features

- Secure license-based software activation system
- Centralized version control and automatic update system
- Multi-language user interface (English and Gujarati)
- Advanced financial reporting system (Accounts, Income, Expense reports)
- Bulk CSV data import and export functionality
- Automated invoice generation with PDF export
- One-click invoice sharing via WhatsApp, Email, and Telegram
- Automated pending payment reminder engine
- Real-time business dashboard and analytics
- Employee management and salary tracking system
- Secure local database with backup and recovery system
- Production-ready architecture designed for commercial software distribution

---

Why Choose This System

- Designed specifically for jobwork-based business operations
- Built for commercial distribution and licensed software resale
- Improves operational efficiency by automating manual workflows
- Supports regional language interface for local business usability
- Provides structured financial reporting for better business insights
- Scalable system architecture for growing businesses
- Secure licensing and update system for controlled software distribution
- Reliable and maintainable architecture for long-term use

Developed By

Sarthak Patel
C# | .Net Desktop Application Developer | Shopify Developer
ERP and Licensed Software Development Specialist

Specializing in:

- Commercial software architecture design
- License-based desktop application development
- ERP workflow automation systems
- Software activation & version control mechanisms
- Business automation solutions

With hands-on experience in building **production-ready licensed software systems**, Sarthak focuses on delivering scalable business applications designed for **real-world operational environments and commercial software distribution.**

Available for enterprise desktop architecture consulting and development of secure, scalable, license-based, production-ready commercial software solutions.
